Description :

Prsentation de l'diteurThe Minnesota Study of Twins Reared Apart startled scientists by demonstrating that twins reared apart are as alike, across a number of personality traits and other measures, as those raised together, suggesting that genetic influence is pervasive. Segal offers an overview of the studys scientific contributions and effect on public consciousness.Revue de presseThe 'Jim twins' constituted a watershed in the nature-nurture debate. When Jim Lewis and Jim Springer - twins separated at four months - were reunited at 39, both were found to have loved maths, worked as sheriffs and practised carpentry, among other startling parallels. The case underlined the importance of genetics and led to the Minnesota Study of Twins Reared Apart. In this inclusive overview, Nancy Segal, director of the Twin Studies Center at California State University, Fullerton, examines the study that turned ideas on parenting, teaching, health

and sexual orientation upside down. --Nature, 21st June 2012
